

four2labs

An AI that answers your phone, knows your business, and never clocks off.

One assistant that takes your calls, talks to your customers in their own language, answers their questions properly, books the appointment, records the order, and writes it all down. Day, night, weekend, festival.

What your business gets

A capability overview

four2labs.com

Tech that grows your business · India & US

IN ONE PAGE

What you get.

You get a member of staff who answers every call, knows everything about your business, and never goes home. Six things, plainly:

01 Your phone is always answered.

Every call, on the first ring, at every hour. Nights, Sundays and festival days included.

02 It knows your business.

It has read your price lists, services and policies, so the answers are yours, not guesses.

03 It fills your calendar.

Enquiries become confirmed bookings inside the same call, without anyone calling back.

04 It takes orders.

Item by item, read back and confirmed, recorded against the customer for your team.

05 It speaks their language.

English, Hindi, Telugu, or whatever your customers speak. In a voice that sounds human.

06 It writes everything down.

Every call recorded and transcribed, every customer and outcome logged in your CRM.

WHAT IT LOOKS LIKE

A normal Tuesday, with it switched on.

Nothing here needs you to do anything. This is the assistant working while you run your business.

- 6:50 AM** ○ **Before you open**, a customer calls. It answers, explains your service, and books them in for Thursday morning. You find out when you look at your calendar.
- 11:30 AM** ○ **Your busiest hour**. Four people call at the same time. All four are answered immediately. Nobody waits, nobody hears an engaged tone, nobody gives up.
- 2:15 PM** ○ **A detailed pricing question** about a specific package. It reads the figure straight off your own rate card and gets it exactly right.
- 4:00 PM** ○ **It makes its own calls**. Tomorrow's appointments get a reminder, and last week's quotes that went quiet get a friendly follow-up.
- 6:30 PM** ○ **You close for the day**. It doesn't.
- 9:40 PM** ○ **Someone on your website** taps to talk, asks three questions, and books a consultation. Their details are in your CRM before you wake up.
- Sunday** ○ **While you're with family**, it keeps answering, keeps booking, and keeps a recording and written transcript of every single conversation.

That's the whole idea.

Nothing gets missed, nobody waits, and every conversation ends with something actually done rather than a message for someone to deal with later. The rest of this document explains how each part of that works.

THREE WAYS IN

Wherever your customer reaches out, it is there.

The same assistant, the same knowledge, the same manner. Your customer chooses the channel and never notices the difference.

They call your number**INBOUND**

It answers on the first ring, greets them by your business name, and handles the conversation properly. No queue, no hold music, no "press 1 for sales." If a hundred people call at once, a hundred people get answered. When something genuinely needs a person, it hands over cleanly with the full context.

It calls them**OUTBOUND**

Appointment reminders, delivery confirmations, payment follow-ups, feedback calls, re-engagement of old leads, campaign outreach. It works through a list at a pace no team could match, has a real conversation with whoever picks up, and logs exactly what happened on each one.

They visit your website**WEB VOICE & CHAT**

One tap and they are talking to it, straight from the browser, with nothing to download and no number to dial. Visitors who would rather not speak can type instead and get exactly the same assistant. Either way, a browsing visitor becomes a booked appointment before they leave the page.

It sounds like a person

Natural, warm speech with real pauses and intonation, not a robot reading a script. It replies almost instantly, and if the customer interrupts or changes their mind mid-sentence, it keeps up, the way a person would.

In their language

English, Hindi, Telugu and beyond. It can be set up to speak whatever your customers speak, and picks a voice and personality that suits your brand, whether that is warm and casual or calm and professional.

IT LEARNS YOU, NOT THE INTERNET

Give it your documents. It gives you the answers.

Hand over your brochures, price lists, service menus, policies, manuals and FAQs. It reads all of it and answers from it, so customers hear your real prices and your real policy, not something invented.

- **Reads almost anything.** PDFs, Word files, scanned pages, photographs of documents, price tables, spreadsheets, product sheets. Even a phone photo of a printed rate card.
- **Understands structure.** It pulls figures out of tables and forms, so a question about a specific package or a specific model gets the specific number back.
- **Stays current.** Change your prices, add a service, update a policy, and the assistant is speaking from the new version straight away.
- **Knows what it doesn't know.** Rather than making something up, it says so and offers to put the customer through or take a callback.

FOR CUSTOMERS

Customer & tech support

Answers the questions your team fields all day, walks people through setup and troubleshooting step by step, checks their situation before escalating, and only involves a human when a human is genuinely needed.

FOR YOUR TEAM

An internal knowledge desk

Your own staff can ask it about procedures, policies, stock, specifications or pricing rules and get a straight answer in seconds, instead of interrupting whoever happens to know.

The result: one version of the truth.

Every customer, on every channel, at every hour, gets the same correct answer. No new-joiner guesswork, no "I think it's around this much", no promise your team then has to walk back.

BEYOND ANSWERING

It doesn't take a message. It gets the thing done.

Answering a question is the easy half. The value is in what happens next, and this is where the assistant behaves less like a chatbot and more like staff.

Books appointments

INTO YOUR CALENDAR

The customer says "sometime Tuesday afternoon." It checks your real availability, offers the open slots, takes their details, creates the booking and sends the confirmation. Your working hours, slot lengths, gaps between jobs and holidays are all set by you, and it never double-books.

Takes orders

ITEM BY ITEM

It walks through what they want, quantities, variations, delivery details and special instructions, reads the whole thing back for confirmation, and records the order against the customer, ready for your team to fulfil.

Feeds your CRM

AUTOMATICALLY

Every caller becomes a contact record. Name, number, what they wanted, what was promised, what stage they are at, when to follow up. Your pipeline fills itself from real conversations instead of from whatever someone remembered to type in.

Qualifies and routes

BEFORE IT REACHES YOU

It works out who is a serious buyer and who is browsing, gathers the details your sales team would have had to ask for anyway, and passes the good ones through to the right person with the background already attached.

Every call recorded

Full audio, saved and searchable.

Every word written down

Timestamped transcripts of both sides.

Every outcome tracked

Who called, why, and what came of it.

THE SAME ENGINE, MANY JOBS

Once it can talk and act, it can do a lot of jobs.

The assistant is not locked to one script. It is shaped around whatever work you need done, which is why the same system runs a front desk in one business and a hiring pipeline in another.

01

Call centre, without the floor

Inbound reception and outbound campaigns running together, at any volume, with every conversation logged. Peak season needs no extra hiring, no extra training and no drop in quality on call number four hundred.

02

Marketing that follows through

Automated follow-up sequences, reactivation of cold leads, offer announcements, feedback and review requests. The part of marketing everyone plans and nobody finds time to actually do.

03

Interview and screening bots

First-round screening at scale. It runs a consistent conversation with every applicant, asks your questions, records the answers, and shortlists so your team only spends time on people worth meeting.

04

Teaching and revision bots

For coaching centres, training teams and institutes: it quizzes students, explains what they got wrong, revises topics on demand and reports back on who is struggling with what.

05

Onboarding and training

New staff and new customers get walked through setup, policy and process by something endlessly patient that will happily explain the same thing a fourth time without sighing.

06

Purpose-built business bots

Anything conversational and repetitive in your operation can be shaped into its own assistant, connected to the systems you already run, and handed the job permanently.

WHERE IT EARNS ITS KEEP

If your growth depends on someone picking up, this is for you.

The pattern is always the same: a business where enquiries arrive faster than people can answer them, and where a missed call is a lost customer.

BUSINESS

WHAT IT TAKES OFF THEIR HANDS

Clinics & dental	Books and reschedules patients, answers timing, fees and preparation questions, calls to confirm and reduce no-shows.
Real estate	Qualifies buyers, answers property and pricing questions, books site visits, and chases every enquiry the same day.
Coaching & institutes	Handles admission enquiries, explains courses and fees, books counselling, and revises with students afterwards.
Salons, spas & gyms	Fills the diary around the clock, manages rescheduling, and calls back lapsed clients with an offer.
Restaurants & hotels	Takes orders and reservations at peak hour, answers availability and menu questions, confirms bookings.
Auto sales & service	Books service slots, gives status updates, explains packages, and follows up on quotes that went quiet.
Legal, CA & consulting	Screens enquiries, explains services and process, books consultations, and protects billable hours from tyre-kickers.
Retail & distribution	Takes repeat orders by phone, answers stock and pricing questions, and calls customers when it is time to reorder.
Contractors & services	Captures job enquiries from the field, schedules visits, and keeps customers informed without anyone stopping work.
Staffing & recruitment	Screens candidates at volume, verifies basics, and books interviews with the ones who fit.

WHAT ACTUALLY CHANGES

What this is worth to your business.

- **Nothing gets missed.** Every call, every enquiry, every hour, including the nights and weekends when your competitors are closed and your customers are free.
- **Your calendar fills itself.** Enquiries turn into confirmed bookings inside the same conversation, rather than becoming a callback list nobody works through.
- **Your team stops repeating itself.** The routine questions and the routine bookings handle themselves, so skilled people spend their day on work that needs them.
- **You grow without hiring for it.** Twice the call volume needs no extra desks, no recruitment, no training cycle. The assistant simply handles it.
- **You serve customers you were losing.** People who would not have transacted in English now get served properly in their own language.
- **You finally know what customers ask.** Every conversation is recorded and written down, so the real objections, the real questions and the real drop-off points stop being guesswork.
- **Quality stops depending on the day.** The same knowledge, the same patience and the same manner on the first call of the morning and the last call of a bad Friday.

24/7

Answered, every hour of every day, including holidays

Zero

Customers left on hold, however many call at once

100%

Of conversations recorded, transcribed and tracked

And it is yours.

The system runs on infrastructure you control, with your own accounts behind it. Your customer conversations and your business documents stay with you rather than sitting inside somebody else's product. No per-seat pricing, no being locked in, and nothing about how you serve your customers decided by a vendor.

HOW IT COMES TOGETHER

Live in weeks, not quarters.

You do not need a technical team, a project manager, or a six-month plan.

You need an hour to tell us how your business works.

01

We listen

A relaxed conversation about your business, the calls you get, the questions that repeat, and what is actually slowing you down.

02

We teach it your business

You hand over the documents you already have. We load them, set your hours, your services, your booking rules and your escalation points.

03

We give it a voice

You choose the languages, the voice and the personality, and approve how it greets your customers and how it handles the awkward calls.

04

We connect it up

Your phone number, your website, your calendar and your CRM. It starts on a slice of your calls so you can hear it working before it takes them all.

05

We go live

It takes the calls. You listen to the recordings, read the transcripts, and see the bookings appear in your calendar.

06

We keep improving it

Real conversations show us what to sharpen. We tune the answers, add what is missing, and it gets better at your business every month.

Start with one job.

Most businesses begin with the single thing that hurts most, usually the missed calls or the booking admin, and see what it does for a month. Once it has proved itself there, extending it to orders, follow-ups, support or outbound is a configuration change, not a new project.

Let's put it on your phone line and see what it does.

The fastest way to understand it is to talk to it. Call us, or open our site and tap the orb, and you will be speaking to the same assistant we would build for you.
